

Press release :

### Jam-Trimmer™ Launched

Ludwig Moreau, Manager of Hydraulique Méditerranée, the Antibes based, hydraulics maintenance and fabrication company, announces the coming on the market of their patented Jam-Trimmer™.

The Jam-Trimmer™ is a hydraulic ram with a releasable jammer attached, helping the fine trimming of sheets and halyards particularly when used with captive winch systems.

The Jam-Trimmer™ is also useful with blocked halyard on superyachts wishing to trim the luff of their sails during regattas without having to go through the exercise of dismounting the bitter end fitting.

On self-tacking jibs the Jam-Trimmer™ helps fine tune the sail without using the captive winch and

Exclusively hydraulic, the Jam-Trimmer™ can be entirely integrated into the manual or push button control panel of the ship's hydraulic system.

The Jam-Trimmer™ shall be present on the Monaco Yacht Show at booth QS6 Darse Sud. For all further information contact: [contact@hydraulique-mediterranee.com](mailto:contact@hydraulique-mediterranee.com)
